# THE PROBLEM

**Ride Booking Is App-Dependent**
Most ride-hailing services require users to navigate smartphone apps.

**Digital Literacy Barrier**
Elderly, daily-wage workers, and low-digital-literacy users may struggle with app-based booking.

**Complex Booking Process**
Finding locations, entering details, and completing multiple steps can be difficult.

**Accessible Users Get Left Behind**
People may have smartphones but still lack easy access to digital mobility.

# SOLUTION

A **voice-first mobility platform** that enables seamless ride booking through a simple phone call.

**Book by Voice**
Users simply call AVAAS and describe their ride requirement naturally.

**AI-Powered Assistance**
AI understands the user's request, locations and ride requirements.

**Accessible Mobility**
Enables elderly, daily-wage and low-digital-literacy users to access transportation without navigating apps.

AVAAS

# PRODUCT OVERVIEW

A voice-first mobility platform that makes ride booking simple, accessible, and app-free.

1

**Voice-Based Booking**

Call AVAAS and describe your locatiion naturally.

2

**AI Conversation**

Understands intent, pickup and destination through voice.

3

**Location-Based Ride Access**

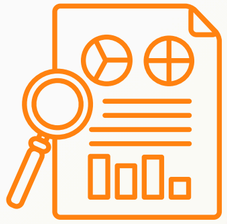

Uses location and ride needs to facilitate a suitable ride.

4

**Accessible Mobility**

Enables elderly, daily-wage and low-digital-literacy users to access rides without navigating apps.

# WHY IT WORKS

**Simple & Familiar**
Users already know how to make a phone call — no new app to learn.

**AI-Powered Understanding**
AVAAS understands natural voice requests, locations and ride requirements.

**Accessible by Design**
Helps elderly, daily-wage and low-digital-literacy users access mobility easily.

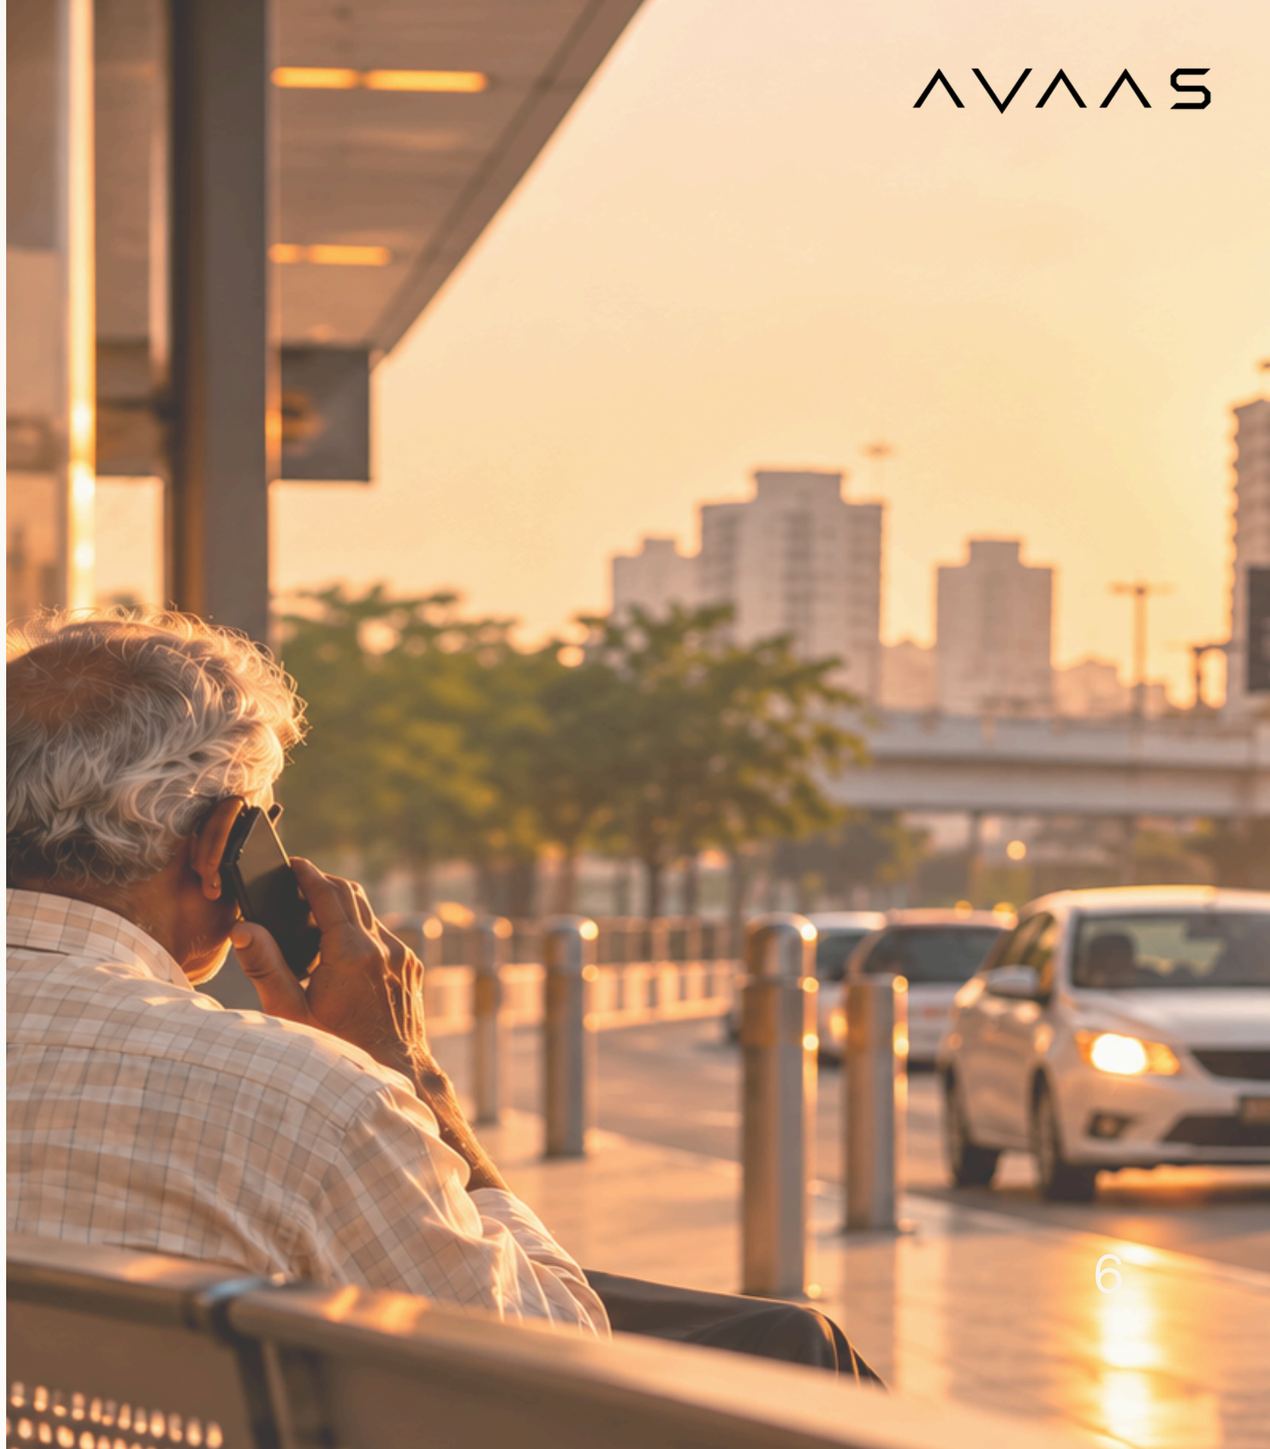

# TARGET AUDIENCE

**Elderly Users**
People who find smartphone apps difficult to navigate.

**Dally-Wage Workers**
Users who rely on affordable, everyday transportation and may have limited digital literacy.

**Rural & Low-Digital-Literacy Users**
People who have access to phones but are less comfortable with app-based services.

**Assisted Users**
Family members or caregivers booking rides for elderly or other users.

# HOW IT WORKS

1

**Make a Call**
User calls AVAAS and speaks their ride requirement.

2

**Describe Location**
AVAAS understands the pickup and destination through voice.

3

**Find a Ride**
AVAAS processes the request and facilitates a suitable ride.

4

**Confirm the Ride**
User receives the driver and ride details through call.

# COMPETITIVE LANDSCAPE

| Feature | Traditional Ride-Hailing Apps | AVAAS |
|---|---|---|
| Key Focus | App-based ride booking | Voice-based ride access |
| Strength | Established ride networks | Simple, accessible phone-based booking |
| Limitation | Requires app navigation and digital literacy | Dependent on mobility provider availability |

# ROADMAP

## PHASE 1

**Concierge Hustle**
Launch a manual voice-based ride-booking service to validate demand and understand user behaviour.

## PHASE 2

**Mobility Integration**
Integrate with mobility providers and expand automated ride-booking capabilities.

## PHASE 3

**Scale & Expand**
Scale across India, support more languages, and extend AVAAS to services like groceries, healthcare, and other everyday needs.

AVAAS

“AVAAS is not building another ride-hailing app.
We’re making mobility accessible through the
simplest technology people already know
— a phone call.”
